About us

DTS GmbH - Diamond Tooling Systems

Welcome to DTS - Diamond Tooling Systems GmbH!

Based in Kaiserslautern - Germany - we have specialized in the development, production and distribution of precision tools equipped with ultrahard cutting materials, such as PCD (polycrystalline diamond), CVD-D (CVD thickfilm diamond), UltraDiamond (monocrystalline binderless diamond) and CBN (cubic boron nitride). As a leading manufacturer for tools with lasered cutting edges, we offer machining solutions in the areas of turning, milling, grooving, drilling, reaming, threading, and tool holding.

To be able to economically process ultra-hard cutting materials such as PCD, CVD-D and CBN on precision tools we realized early on that we would have to move away from the traditional production technology of „grinding“ to new technologies such as the „laser removal process“. This decision has contributed to the fact that our customers regard us, DTS GmbH, as the pioneer and leading manufacturer of lasered tools for machining.

Ultra-hard high-performance cutting materials have a key function in metal-cutting manufacturing. Precision tools equipped with ultra-hard cutting materials are products that require a great deal of explanation. The economical use of the cutting materials is only ensured if the machining process and the cutting material are coordinated with each other.

This is exactly where we at DTS - Diamond Tooling Systems GmbH - step in: Tools and processes are subjected to a comprehensive analysis by our experienced application engineers. Subsequently, the new process optimization is presented to the customer and in the next step, it is implemented in their production. Only in that way is it possible to exploit the optimum potential of our high-tech cutting materials.

Our experienced application engineers are also available to advise you during ongoing production. This close cooperation and mutual trust is the basis of our success.

With more than 25 years of optimization experience in the processing industry, this is where we see our strength!

PASSION FOR DIAMOND...

ultrahard cutting materials at a glance

... is not just a slogan for us - we live this passion in our daily dealings with our customers and we are your partner when it comes to diamond or CBN tools.

Polycrystalline diamond (PCD)

The well-known Standard Diamond

PCD is a synthetically produced, extremely tough, intergrown mass of diamond particles with a random orientation in a metal matrix. It is produced by sintering selected diamond particles under high pressure and high temperatures.

Graphite serves as a catalyst allowing the PDC crystals to intergrow. PCD has a high thermal conductivity and good heat dissipation away from the cutting edge. In addition, PCD has the highest bending fracture strength of all cutting materials.

PCD is very well suited for machining aluminum with a Si content of up to 10% and/or other abrasive fillers. The thermal hardness is about 750°C. The areas of application are like those of CVD thick-film diamond, but CVD thick film has a higher cost effectiveness with hard-brittle materials or aluminum from a Si content of 10%.

CVD-Thickfilm Diamond (CVD-D)

The Star among Diamond Cutting Materials

For the machining of hard-brittle materials such as Ceramics, glass, glass-Ceramics, tungsten Carbide, MMC and fiber-reinforced composites such as CFRP and GFRP. Due to the lack of a bonding matrix, the diamond content is much higher than with PCD. In the group of ultra-hard cutting materials, binderless CVD-D is one of the hardest man-made diamond cutting materials.

CVD-D is characterized by high hardness as well as high wear resistance. These properties make CVD-D the perfect cutting material for machining abrasive materials. Compared to PCD, which is damaged by the abrasive particles due to its soft metallic binder phase, the CVD-D cutting edge remains stable due to its binderless anchoring in the diamond matrix.

With the correct use of CVD-D, the tool life can be increased by up to 10 times (and even more) compared to PCD!

Binderless Diamond (UltraDiamond)

The hardest Mono Crystal

Single-crystal elements are laser-cut from diamond blanks in a defined orientation using laser segmentation technology. This new technology makes it possible, in addition to polycrystalline cutting materials such as PCD and CVD-D, to also braze a monocrystal (UltraDiamond) under high vacuum on any tool carrier. Compared to PCD, the tool life can be increased by approx. 15 to 25 times and compared to CVD-D by approx. 2 to 5 times.

The areas of application are similar to PCD and CVD-D, but this monocrystalline cutting material offers a further significant increase in tool life in all applications where PCD and CVD-D reach the limits of economic viability. The UltraDiamond cutting material makes economical machining of very hard, highly brittle materials such as Ceramics, glass, glass-Ceramics and hard metals with low cobalt binder and nickel binder (<10%) possible.

Polycrystalline Cubic Boron Nitride (CBN)

Chemically resistant and stable at high temperatures

of up to 1,400°C. Boron nitride powder is the starting point for the production of CBN, which has been available since the end of the 1960s. It is produced under high pressure and at temperatures of over 1,500°C and the many different substrates are specifically adapted to the final application.

CBN is now considered the second hardest material after diamond cutting materials!

The applications of CBN take place in the automotive industry, aerospace, tool and die and mold making as well as in mechanical engineering. The wide range as cutting and abrasive material includes hardened steels, cast irons, chilled cast iron, sintered materials, stellites, nickel- and cobalt-based superalloys. In many applications, cubic boron nitride is preferred to diamond cutting materials because it is absolutely stable in air at temperatures up to 1,400°C. Diamond, on the other hand, begins to decompose at a temperature of approx. 750°C.

Compared to PCD, CBN is also characterized by its chemical resistance to ferrous materials.

Our cutting materials

and their main areas of application at a glance

Today, CBN is considered the second hardest material after diamond cutting materials!
Our wide range of cutting materials allows us to offer the ideal solution for your applications.

CBN-H

Our CBN grades-H are specially for the machining of:

- **hardened steels**
up to 72 HRC suitable

H25 • for continuous cut

H35|45|65 • Allrounder-grade for continuous cut to heavily interrupted cut
- 1st Choice is CBN H65

H85 • specially designed for the highly interrupted cut

CBN-P

The CBN grade-P has been specially developed for turning sintered materials.

- **Sintered metal**
(*hardened sintered metal can also be machined with our CBN-H grades)

P25 • for continuous cut and light interrupted cut

P45 • for continuous cut to heavily interrupted cut

CBN-K

The CBN grade K has been specially developed for high-speed turning and milling of cast materials. Among others, you can machine these materials with this CBN grade:

- Grey cast iron
- Ductile iron
- Lamellar/ball cast alloys

K65 • Allrounder for continuous cut to heavily interrupted cut

K85 • for light interrupted cut to heavily interrupted cut

CBN-S

The CBN grade S has been specially developed for turning and milling difficult-to-machine aerospace materials. Among others, you can machine these materials with this CBN grade:

- Ni-, Co-, Fe- & Cr- alloys
- Inconel 718

S85 • Allrounder for continuous cut to heavily interrupted cut

CBN-X

The CBN grade-X has been specially developed for hard turning and milling of tool steels up to a hardness of 72HRC. You can also machine these materials with this CBN grade:

- HSS
- ASP, CPM and other PM- steels
- Cold work steels
- Hot work steels
- VHM >20%Co
- Solid carbide steel joints

X90 • for continuous cut and light interrupted cut

X95 • for light interrupted cut to heavily interrupted cut

Our Cutting Material Assignment

Wiper Indexable Inserts

Functionality

Wiper Indexable Inserts:

Advantages when using Wiper Geometries

By using the same feed rate a 2-4 times better surface quality can be obtained or with a 2-4 times higher feed rate the same surface quality can be reached.

To get the wiper geometry into cutting condition please use the following lead angles at the machine:

C and W Type: 95°

D Type: 93°

Alternatively, you can use a sharp insert with F-geometries.

DTS-Specials Face / Axial Machining:

Our DXGW cutting insert is designed for face and axial machining of contours from a minimum outside diameter of 10mm, using the maximum groove depth of 1.5mm.

It is tipped with CVD-D as standard, but is of course also available with PCD or Ultra-Diamond on request.

Application range:

- CBN-P Sintered Steel ...
- CBN-K Grey Cast Iron (GCI), Ductile Cast Iron (DCI) ...
- CBN-S Ni-, Co-, Fe- and Cr-Alloys, Titanium, Titanium Alloys ...
- CBN-H Steel hardened up to 72 HRC, Cast Iron hardened ...
- CBN-X Tool Steel hardened, Stellite, Stainless Steel hardened, powder metallurgical Steel ...

You will find further application ranges in the detailed overview on page 8.

- CBN-K Grey Cast Iron (GCI), Ductile Cast Iron (DCI) ...
- CBN-S Ni-, Co-, Fe- and Cr-Alloys, Titanium, Titanium Alloys ...
- CBN-H Steel hardened up to 72 HRC, Cast Iron hardened ...
- CBN-X Tool Steel hardened, Stellite, Stainless Steel hardened, powder metallurgical Steel ...

You will find further application ranges in the detailed overview on page 8.

Special tools on request for you!
Please send inquiries to info@diamond-toolingsystems.com

All our products are also available in the online shop.
Visit us at diamond-tools24.com

You can find our complete **holder program** in our tool holder catalog or in our online shop.

Subject to technical changes.

Cutting Parameters

for our CBN Grades

- continuous cut
- light interrupted cut
- heavy interrupted cut

Material		P25			P45			K65			K85			S85		
		V_c [m/min]	a_p [mm]	F [mm/rev]	V_c [m/min]	a_p [mm]	F [mm/rev]	V_c [m/min]	a_p [mm]	F [mm/rev]	V_c [m/min]	a_p [mm]	F [mm/rev]	V_c [m/min]	a_p [mm]	F [mm/rev]
Ductile Cast Iron (DCI)	min.							250	0,01	0,01	200	0,01	0,01			
	max.							1200	2,80	0,35	1000	2,80	0,30			
Grey Cast Iron (GCI)	min.							500	0,01	0,01	450	0,01	0,01			
	max.							2500	2,80	0,40	1400	2,80	0,35			
Ni-, Co-, Fe- and Cr-Alloys	min.													80	0,01	0,01
	max.													350	0,50	0,30
Sintered Steel	min.	200	0,01	0,01	180	0,01	0,01									
	max.	400	2,60	0,30	300	2,00	0,30									
Titanium	min.													80	0,01	0,01
	max.													240	0,50	0,30

Subject to technical changes.

! Cutting parameters for hard turning can be found on page 58.

Cooling recommended

In machining with CBN inserts, proper cooling is a key to successful machining.

Here you will find our recommendation:

		Dry	Air	Emulsion	Oil
P		4. Choice	3. Choice	1. Choice	2. Choice
		2. Choice	1. Choice		
		2. Choice	1. Choice		
K		4. Choice	3. Choice	1. Choice	2. Choice
		2. Choice	1. Choice		
		2. Choice	1. Choice		
S			3. Choice	1. Choice	2. Choice
			2. Choice	1. Choice	
		2. Choice	1. Choice	3. Choice	

Never use max. a_p with max. feed rate

Significantly higher cutting depths and feeds can be realized with RNGN and SNGN Solid inserts.

If you have any further technical questions, please do not hesitate to contact us by phone or e-mail!

The reprint of our catalogs, copies of our flyers and newsletters or only excerpts such as illustrations, designs, technical information and design require the written permission of DTS GmbH. Copies or only excerpts such as illustrations, designs, technical information from our homepage and our online store are only permitted with the written consent of DTS GmbH.

All rights are reserved. Errors, misprints or printing errors do not entitle to claims. The pictorial and graphic representation of our tools do not necessarily have to correspond to the actual tool in all details.

We reserve the right to make production-related technical changes and changes to the delivery program. The cutting values given are guide values which must be adjusted according to the process environment.

Safety Instructions:

- ▶ DTS tools equipped with ultra-hard cutting edges are very sharp laser cut tools.
- ▶ Careful handling of the tools during unpacking and their use is recommended.
- ▶ Wearing protective gloves reduces the risk of injury.
- ▶ Material chipping and tool breakage may occur during machining, wearing safety glasses is recommended.
- ▶ Balanced holders are recommended for speeds above 10,000 rpm.
- ▶ We do not accept any responsibility for tools that have been modified, reground or used incorrectly and beyond their normal service life.
- ▶ Protective goggles are recommended when using DTS tools, sparks may also occur, make sure that no fire can occur.
