

CUTTING TOOL CATALOG (INCH)

2023

In the Northern depths, a wondrous sight,
A fish so vast, a true delight,
Named Kun, it spans a thousand miles,
A creature of immense style.

Transformed to Peng, a bird so rare,
Its wingspan vast, beyond compare,
Thousands of miles, it takes to flight,
A soaring wonder, a true delight.

When Peng takes flight, its rage is seen,
Its wings a sight, like clouds serene,
A sight that leaves us all in awe,
A vision of beauty, without a flaw.

Company Profile

Ganzhou Achteck Tool Technology Co., Ltd. is a wholly-owned subsidiary of Chongyi Zhangyuan Tungsten Co., Ltd. (Listed Company with stock code 002378). The registered capital of Achteck is 260 million USD with 700 employees. The main products include: Coated Carbide Inserts, Carbide Rod and supporting tool holders. Achteck is known for its outstanding R&D competence, production and testing equipment and its coated carbide insert production technology. Achteck produces inserts for Turning, Grooving, Milling and Drilling that are widely applied in automotive, energy, die and mold, general machinery, aerospace and other industries.

Achteck Tool is technology oriented, owns a strong research team that keeps on innovating. Having "Benefits from Resources, Reliance on Technologies, Devotion to Humanity and Top with Trust" as the operating philosophy and "Safety, Harmony, Efficiency and Innovation" as the target, Achteck aims to become a well-known brand in the world and a first-class cemented carbide manufacturer in China.

Small Tools

Product Features and Applications

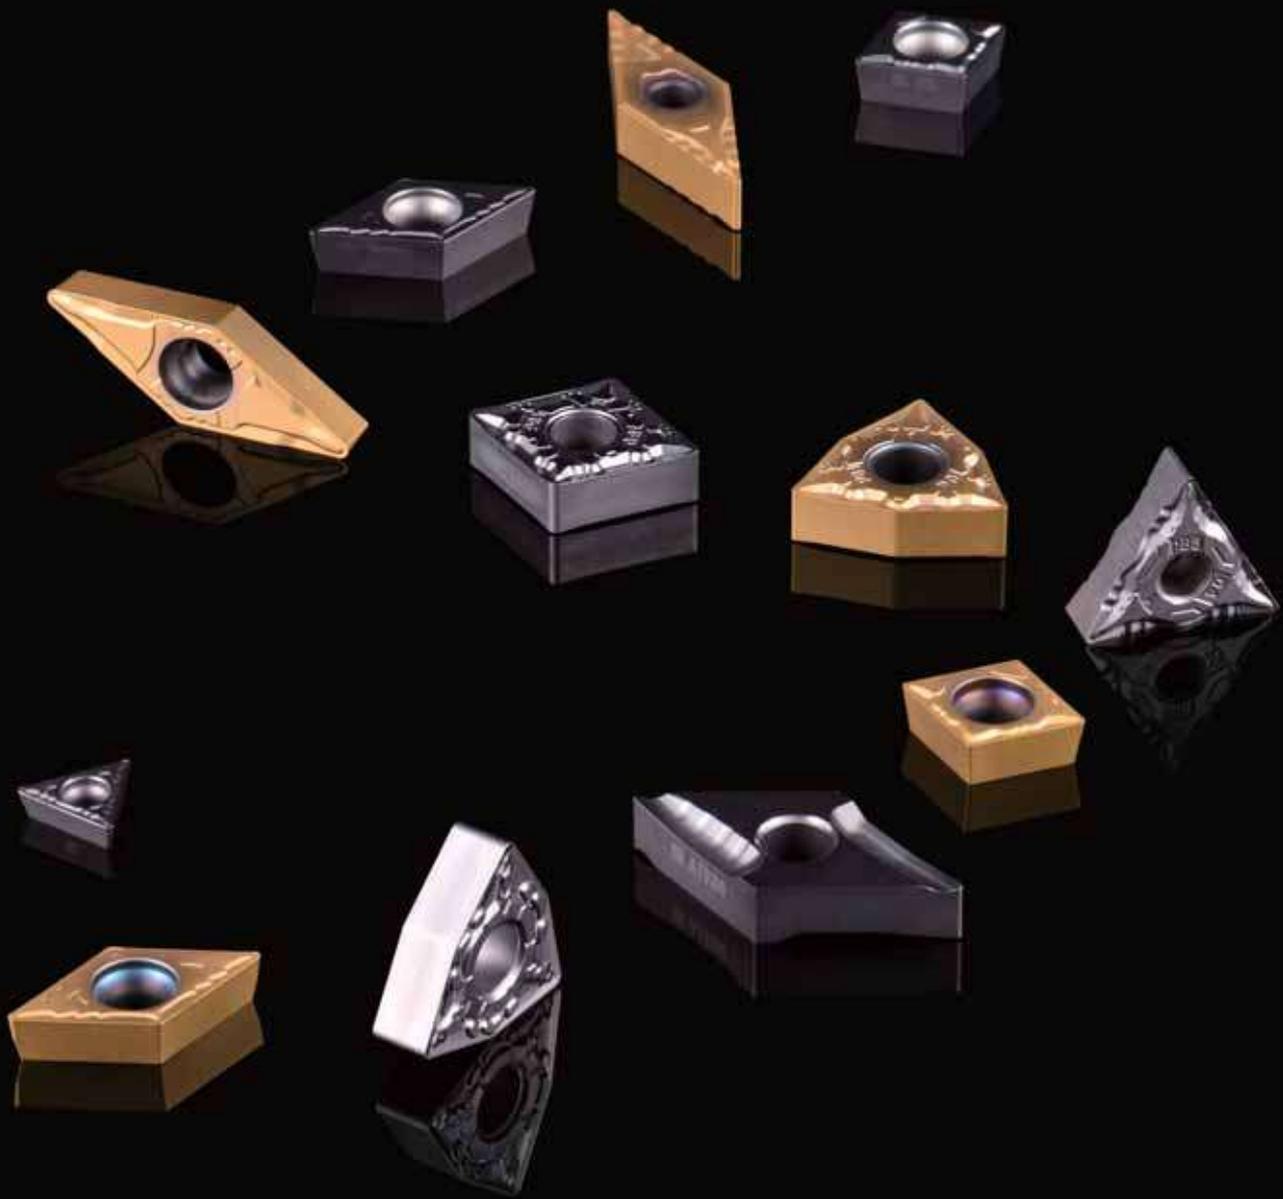

- Small tools has a wide range of product offering combined with many grades to meet the machining requests of different materials.
- Ground inserts with geometry UF and LF are good for high precision finishing and good chip breaking.
- Multifunction ASW series could combine with parting off, backturning and threading inserts for multipurpose machining to reduce the cost.
- Small Dia. solid carbide cutting tools can cover different machining, such as grooving, threading and small diameter boring.

Round Tools

Product Features and Applications

- Achteck has abundant solid carbide round tools including drills and end mills. Offering higher productivity and cost effectivitiy to all customers.
- Drills: D106/ D108 standard drills, diameter range from 0.12 inch to 0.79 inch; universal 3xDc to 8xDc solid carbide drills.
- End mills: ECO/PRO/XP solid carbide end mills are 3 product lines, from 2 cutting edges to 6 cutting edges, from round corner to waved edge, from univeral machining to dedicated machining. Solid carbide end mills have various product types.

Product Features and Applications

- Cermet inserts have high thermal conductivity, good chemical stability and toughness.
- AT202 grade is the 1st choice for general machining, is suitable for steel finishing and semi-finishing, has great performance at high-speed continuous machining and stable machining under poor machining condition.

Cermet Inserts

Grooving Inserts

Product Features and Applications

Double edged inserts

- Holder offering includes external, internal, face grooving, turning and profile machining.
- Inserts width: 0.079 inch to 0.31 inch
- Grooving and parting off geometries: CS, CM, CH
- Grooving and turning geometries: GS, TS, TM, RM, RA.
- Precision ground inserts cover 0.039 inch to 0.31 inch , can be used in parting, grooving and profile machining.
- Unique rake geometry design combined with double relief angle on the sides, obtains more clearance in face grooving and internal grooving, so it can machine larger diameters.

New! Triangular Insert

- Three types of insert: ATG32, ATG43, ASG32.
- Holder offering covers external grooving, internal grooving and profile machining.
- Insert width range: 0.013 inch to 0.19 inch. More choices and good expansibility.
- High precision ground insert obtained excellent surface quality.

Product Features and Applications

- Positive square shoulder milling insert, three cutting edges, economical choice.
- Positive rake angle and spiral edge design, light cutting.
- Nose radius range: R0.8, R1.2, R1.6, R2.0, R2.4, R3.1, R4.0.
- Insert with short wiper, better surface quality.
- Pressed and ground insert choices for different machining precision requests.
- Wide application range: Used for square shoulder milling, face milling, slot milling, ramping, helical interpolate milling.
- Insert tip is protected due to the unique design.

ASM90-TD15 series

Square Shoulder Milling Tools

2023
NEW

Product Features and Applications

- Cutter diameter range (Dc): $\varnothing 2.50$ inch - $\varnothing 10.00$ inch, both left and right hand tool body.
- Close and coarse pitch cutter design, with arbor coupling.
- Negative tangential insert, four left and four right hand cutting edges.
- E class peripheral ground insert, cutting edge with short wiper.
- Application range: Square shoulder milling and face milling; good surface finishing.
- Suitable for steel, stainless steel and cast iron rough and finish milling, good versatility.

ASM90-LN12 series

Square Shoulder Milling Tools

BS, SC1, SL3 New geometries for steel profile turning and stainless steel and heat resistant alloy turning.

ISO Turning Inserts

Features and Applications

BS Geometry

- Suitable for profile machining and corner turning.
- Good chip breaking and smooth chip evacuation in machining at low cutting depth.
- Keep constant chip evacuation in machining at various cutting depth.

SC1 Geometry

- Suitable for stainless steel and heat resistant alloy finish machining.
- Good chip control in machining at low feed and low cutting depth.
- Curved cutting edge reduced cutting force and built-up edge to obtain good surface quality and longer tool life.

SL3 Geometry

- Suitable for machining slender shaft, thin wall and unstably clamped parts.
- Guiding slot is good for precision cooling.
- Suitable for machining stainless steel and heat resistant alloy.

Features and Applications

- CVD coated grade.
- Excellent crater wear resistance and anti-plastic deformation.
- Used in steel high productivity medium and rough turning under stable conditions, high metal removal rate.
- Can withstand high temperature, and maintain good edge reliability under wet and dry machining condition.

AC052P High Productivity Turning Grade ISO Turning Inserts

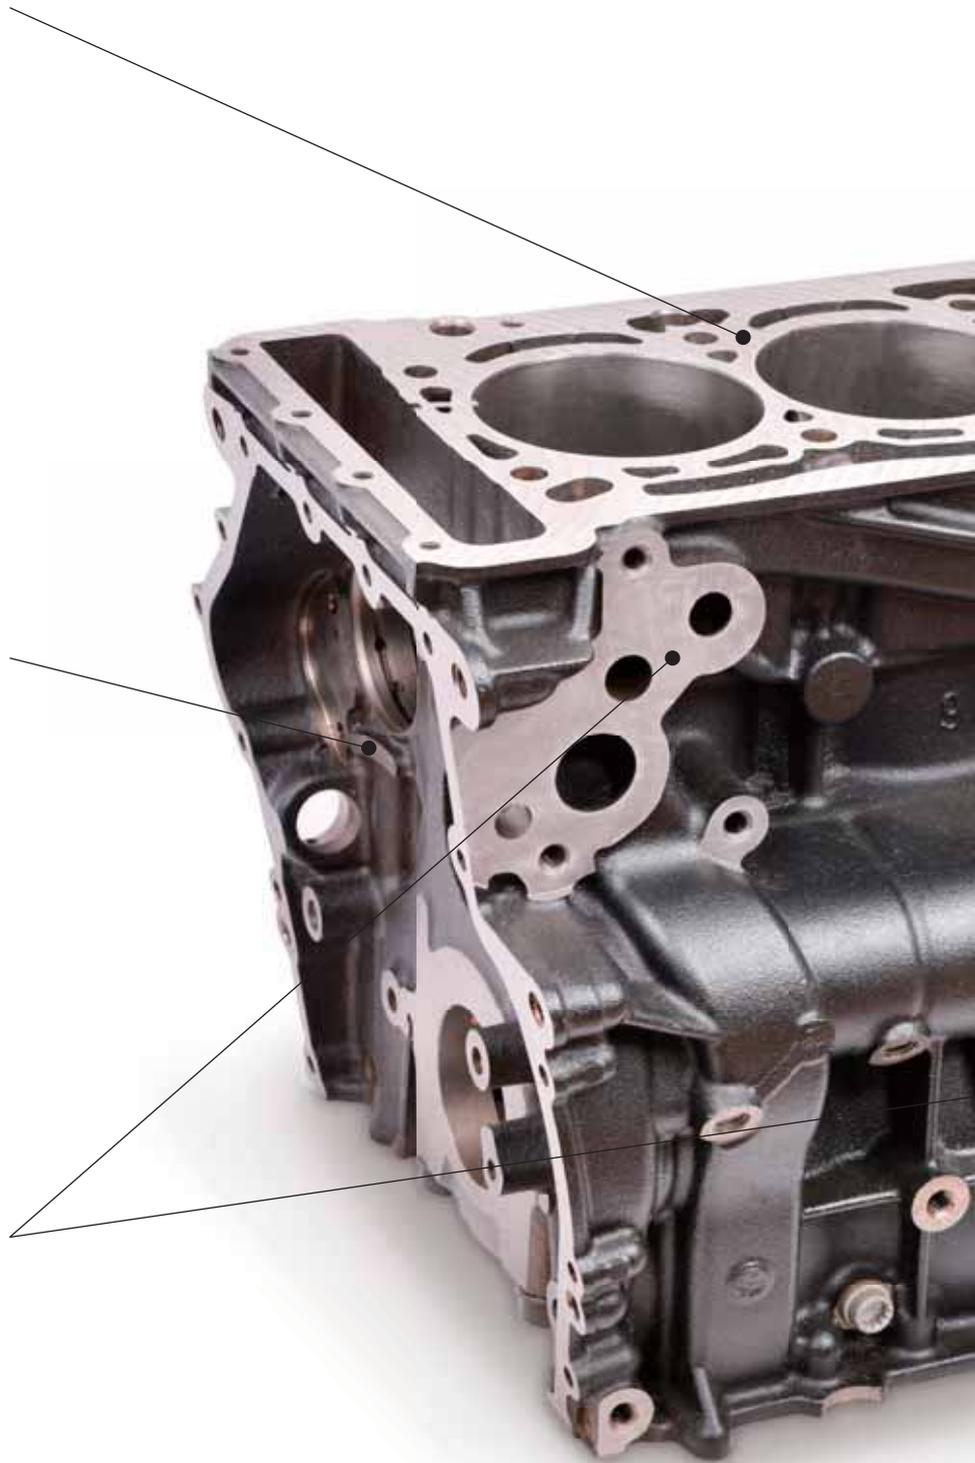

AFM45-XN09-W milling cutter with heptagon inserts, extra close pitch with wedge clamping, combined with heat resistant CVD coated inserts. The ideal choice for cast iron rough milling.

APE90-LN09/LN13 porcupine milling tools in full teeth, high metal removal rate, reliable and safe milling environment.

ASM90-LN09/LN13 square shoulder milling cutter with 4 cutting edge tangential inserts with helical edge profile. The reliable cutting edge can adopt 30% higher f_z , higher metal removal rate and productivity.

AFF40-LN12/15 cast iron finish milling cutter, combined with octagon main cutting inserts and wiper inserts. It's cost efficient and easy to handle. The good wear resistant grade and high precision cutting edge guaranteed excellent surface finishing and longer tool life.

D106 drill series, the substrate has both hardness and toughness, combined with high wear resistant PVD coating. It can reach higher tool life in cast iron machining. The unique drill tip geometry can reduce the edge chipping.

Machining Solutions for Engine Block

Machining Solution for Turbocharger Housing

Special side face milling cutter is used in machining the back face of flange.

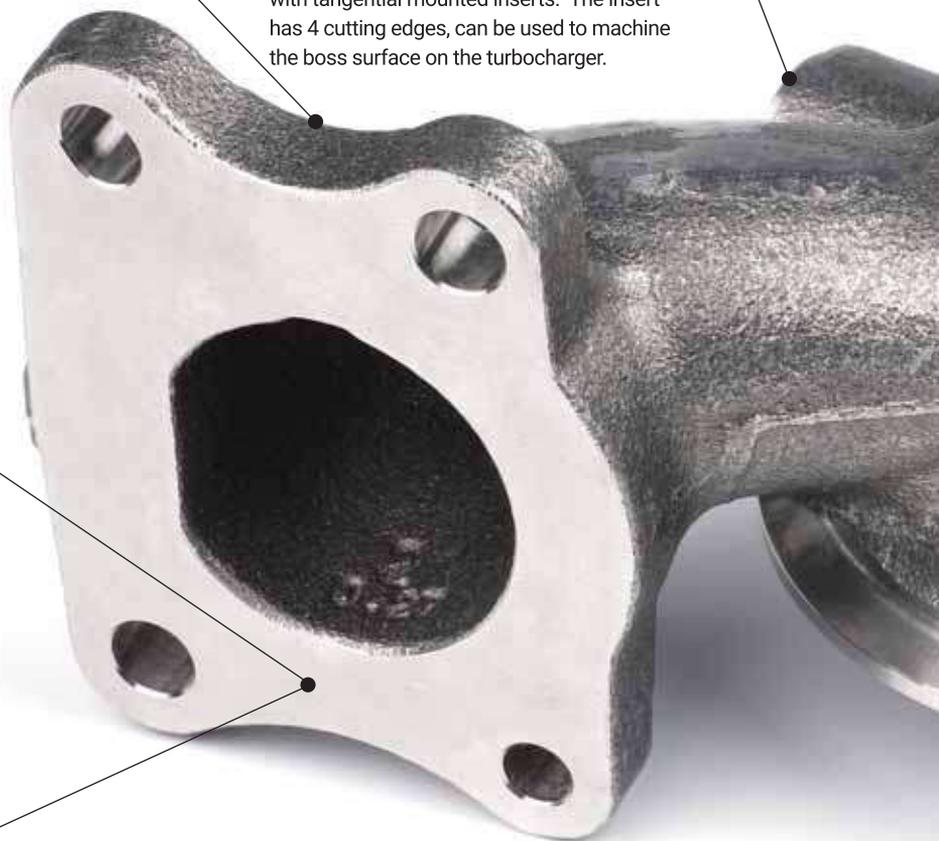

ASM90-LN13 square shoulder milling cutter with tangential mounted inserts. The insert has 4 cutting edges, can be used to machine the boss surface on the turbocharger.

AFF45-0N05-C-S, with 45 degree approach angle, using 16 cutting edge insert with wiper edge. Used in finish milling the flange face of turbocharger casing

AFM45-XN07 face milling cutter with heptagon inserts, 14 cutting edges, with nanostructured PVD coating. Used in rough milling the flange face, with a high performance/cost ratio.

AP100S/AP301M PVD grades, used in rough external turning and face turning of turbocharger housing

ATD grooving insert series can be used in external, face and V-shaped grooving.

Special boring tool, used in the turbocharger housing boring.

Insert: VCGT 2(2)03F-UF AP301M
Holder: SVJCR 1212JX-11F
Applied to external finish turning

D151-03-1000A1 solid carbide drills for stainless steel drilling

ACHTECK

www.achtecktool.com/en

**Machining Solution
for Cellphone Camera Lens Supporting Ring**

Insert: NSG32R060-000AA AP301M
Holder: ASGHR 1212JX-32
Applied to external grooving and parting off

Insert: NSW10L105-020AA AP301M
Holder: Special
Applied to internal grooving and finish boring

APM00-R012 cutter, used in rough milling of blade airfoil

ASM90-WN08 square shoulder milling cutter with negative insert, 6 cutting edges, accurate 90 degree design, used in rough or finish milling blade root and shroud.

ACHTECK

Application	Chip breaker	Features	Chip breaking range	Cross section geometry 
Semi-finishing	<p>PB3</p> 	<p>First choice for steel semi finish turning</p> <p>The positive rake angle combined with small land guarantees edge strength and sharpness, reducing the cutting forces. The wavy side edge design has a good chip breaking results in out-copying turning on the shoulder, and in profile turning at different cutting depths.</p>		
	<p>PC3</p> 	<p>Alternative chipbreaker for steel semi-finish turning</p> <p>Unique geometry design offers wider chip breaking range. Double rake angle for smooth cutting. Enhanced insert tip reduced crater wear.</p>		
Medium	<p>PD3</p> 	<p>First choice for steel medium turning</p> <p>It has a strong chip control ability at low feed and cutting depth, and reduces crater wear. The chip breaking is also very good at high feed and cutting depth due to the geometry design. Double rake angle design makes sharp cutting edge and reduces cutting force.</p>		
	<p>PC4</p> 	<p>First choice for cast iron medium turning</p> <p>Alternative chipbreaker for carbon steel and alloy steel medium turning</p> <p>Flat T-land guarantees the strength of the cutting edge. This multi-purpose geometry can be used in universal applications.</p>		
	<p>PL5</p> 	<p>First choice for steel slender bar turning</p> <p>Open chip breaker leads to smooth cutting with low cutting force, which is suitable for slender shaft turning.</p>

Turning Grade Description

Basic Grades for Turning

P Steel, cast steel, ferrite/martensite stainless steel and malleable cast iron

Basic grade

AC052P P05(P01-P15)

CVD coated grade, has good crater resistance and chipping resistance, which is recommended for high productivity medium and rough turning in stable condition, can keep edge reliability in dry or wet machining with high temperature.

AC150P P15(P10-P25)

CVD coated grade, can be used in finish to rough turning on steel and cast steel, and is recommended in continuous and light interrupted cutting where it can keep high metal removal rate.

AC250P P25(P20-P35)

CVD coated grade, 1st choice for steel turning, used in finish to rough turning on steel and cast steel. It's recommended for continuous and interrupted machining.

AC350P P35(P25-P45)

CVD coated grade, can be used in rough turning on steel and cast steel under poor conditions. Reliable cutting edge made this grade good for interrupted machining with high metal removal rate.

Supplemental grade

AP200U P25(P15-P35)

PVD coated grade, recommended for finish turning on low carbon steel with low cutting speed or low feed.

AC200M P35(P25-P40)

CVD coated grade. Supplemental grade for steel turning where high toughness is required.

AT202 P15(P10-P20)

Uncoated cermet grade. It has excellent built-up edge resistance and chipping resistance which can be used in finish turning with good surface quality or where low cutting force are required.

M Austenitic stainless steel, cast steel, manganese steel, alloyed cast iron, malleable cast iron and free cutting iron.

Basic grade

AC100M M15(M05-M20)

CVD coated grade. It's recommended for finish machining and light rough machining. It's suitable for machining at medium to high cutting speed due to its heat resistance feature of wear resistant coating.

AC200M M25(M15-M30)

CVD coated grade, optimised for semi-finish to rough turning, can be used in interrupted machining in which it can keep edge reliability due to good thermal shock stability and mechanical shock resistance.

AP200U M25(M15-M35)

PVD coated grade, used in finish turning at low to medium speed and also in interrupted turning due to excellent thermal stability, outstanding performance in machining when sharp edge and edge toughness or good surface quality are required.

AP301M M25(M15-M35)

PVD coated grade. Mainly used in machining steel and stainless steel small parts. It has excellent built-up edge resistance, good machining stability, can obtain good surface quality, and achieve longer tool life.

Supplemental grade

AP100S M15(M05-M25)

PVD coated grade, recommended for finish turning due to its high hardness and resistance to plastic deformation.

K**Cast iron, chilled cast iron and short chip malleable cast iron****Basic grade****AC100K K05(K01-K15)**

CVD coated grade, has thick and smooth wear resistant coating and hard substrate, recommended for grey cast iron high speed turning.

AC102K K05(K01-K15)

CVD coated grade, has thick and smooth wear resistant coating and hard substrate, recommended for nodular cast iron high speed turning.

AC202K K15(K10-K30)

1st choice for cast iron turning. It can deal with interrupted cutting due to its high wear resistant CVD coating, used in finish to rough turning on cast iron at low to medium cutting speed.

Supplemental grade**PB90 K10(K01-K20)**

CBN grade. Suitable for grey cast iron and chilled cast iron interrupted finish turning due to its good edge strength and wear resistance.

AT202 K15(K10-K20)

Uncoated cermet grade. It has excellent built-up edge resistance and good plastic deformation resistance. It can be used in nodular cast iron finish turning when surface quality, small tolerance or low cutting force are required.

N**Non-ferrous metals****Basic grade****AW100K N15 (N05-N15)**

Uncoated grade. It has both excellent wear resistance and sharp edge. Used in Al alloy rough to finish machining.

PD20 N10 (N01-N20)

PCD grade, used in non-ferrous material and non-metal material machining which can have longer tool life, completely clean cutting and good surface quality.

S**Heat resistant alloys****Basic grade****AP100S S15(S05-S25)**

1st choice for heat resistant alloys. PVD coated grade has high hardness and plastic deformation resistance, can keep high performance and good wear resistance.

AP200U S25(S15-S35)

PVD coated grade. Used in low cutting speed or light interrupted cutting. Suitable for semi-roughing or continuous machining for a short time due to its good notch wear resistance and anti-heat shock capability.

Supplemental grade**AC100M S15(S05-S20)**

CVD coated grade, suitable for heat resistant alloy continuous high speed machining .

AC200M S25(S15-S35)

CVD coated grade, suitable for heat resistant alloy general machining.

H**Hardened materials****Basic grade****PB30 H10(H05-H15)**

CBN grade with low CBN content, is used in hardened steel continuous machining at high speed and light interrupted machining.

PB60 H15(H10-H25)

1st choice of CBN grade medium CBN content for hardened steel interrupted machining and continuous machining at medium speed.

1-Standard ISO Denomination System	2-Cutting Edge Shape E--Honed  T-Land without honing  S--Land with honed  F---Sharp 	3-T-land Width (in) 005---0.002 010---0.004 015---0.006 020---0.008	4-T-land Angle 10---10° 15---15° 20---20° 25---25°
5-CBN Insert Structure FT-- Full face CBN  SD-- Solid CBN  SL-- Small size tipped CBN  NL-- Standard-tipped CBN (Regrindable) 	6-Number of Cutting Edge 1---One cutting edge 2---Two cutting edges 3---Three cutting edges	7-Cutting Edge Preparation CB---With chip breaker WG---With wiper edge "-" ---Without chip breaker	8-Grade PB30-- Low content CBN PB60--Medium content CBN PB90--High content CBN

PCBN Insert Grade Introduction

Grade	Feature	Application
PB30	Well balanced wear resistance and shock-resistance	Good versatility. Suitable for continuous and light interrupted cutting of hardened steel
PB60	Excellent toughness	Mainly applied in medium interrupted cutting of hardened steel, interrupted and continuous cutting of powder metal and cast iron cutting.
PB90	Good wear resistance, toughness, and shock-resistance	K-mainly applied in cast iron cutting H-heavy interrupted cutting of hardened steel and powder metal machining

PCBN Recommended Cutting Parameters

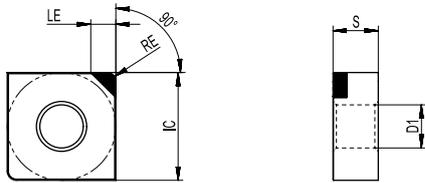

Grade	Material	Hardness	Cutting speed Vc(ft/min)	Feed fn(in/rev)	Cutting depth ap(in)	Recommended application
PB30	Hardened steel	HRC58-62	490-820	0.001-0.008	0.002-0.012	Continuous
PB60	Hardened steel	HRC55-60	160-490	0.001-0.008	0.002-0.02	Interrupted
	Cast iron	HB180-220	490-1470	0.001-0.012	0.012-0.02	Continuous / Interrupted
	Powder metal	-	650-1640	0.001-0.012	0.004-0.012	Continuous / Interrupted
PB90	Hardened steel	HRC55-60	100-390	0.001-0.008	0.002-0.02	Heavy interrupted
	Cast iron	HB180-220	490-1470	0.001-0.012	0.012-0.02	Continuous / Interrupted
	Powder metal	-	980-2620	0.001-0.012	0.004-0.012	Continuous / Interrupted

Grooving Grade Description

Grade for Parting off and Grooving

P

Steel, cast steel, long chipping malleable cast iron.

Basic grade

AP301U P25(P15-P35)

PVD coated grade, suitable for steel, stainless steel and heat resistant alloy grooving. High strength and wear resistant submicron carbide substrate with nanostructured PVD coating. Good coating adhesion, high wear resistance.

AC230P P20(P10-P30)

CVD coated grade. It's mainly used in steel, grey cast iron and nodular cast iron grooving, turning and profiling under high cutting speed. High toughness and wear resistant substrate combined with nano-structured coating offered good wear resistance, coating adhesion, machining stability and longer tool life.

Supplemental grade

AP330M P35(P25-P45)

Brand new PVD coated grade. Suitable for stainless steel and steel finish, semi-finish and rough grooving. It's the 1st choice for stainless steel turning, and good for steel turning as well. It has high thermal stability, wear resistance, and excellent thermal crack resistance. Enriched cobalt superfine grain substrate offers high hardness and good anti shock capability which reduces the edge chipping problem.

M

Austenitic/ferrite/martensite, cast iron, manganese steel, alloyed cast iron, malleable cast iron, free cutting iron

Basic grade

AP330M M35(M25-M45)

Brand new PVD coated grade. Suitable for stainless steel and steel finish, semi-finish and rough grooving. It's the 1st choice for stainless steel turning, and good for steel turning as well. It has high thermal stability, wear resistance, and excellent thermal crack resistance. Enriched cobalt superfine grain substrate offers high hardness and good anti shock capability which reduces the edge chipping problem.

Supplemental grade

AP301U M20(M15-M35)

PVD coated grade. Suitable for steel, stainless steel and heat resistant alloy grooving. High strength and wear resistant submicron carbide substrate with nanostructured PVD coating. Good coating adhesion, high wear resistance.

N

Non-ferrous metal

Basic grade

AW100K N15 (N05-N25)

Uncoated ultra-fine grain substrate, specially treated cutting edge, suitable for aluminum alloy grooving.

Milling Grade Description

Grade for Normal Milling

P Steel, alloyed steel, unalloyed steel

Basic grade

AP251U P25(P15-P35)

PVD-coated grade, suitable for most applications. First choice for steel machining. It is recommended to be used in rough to finish machining of steel under stable working conditions, good for dry and wet machining with small cutting width, complex tool path and sticky materials.

AC301P P35(P25-P40)

CVD coated grade is suitable for big cutting depth, medium to high speed milling of steel under bad machining conditions.

Supplemental grade

AP351M P35(P25-P45)

PVD coated grade, medium hardness substrate, which is a supplement for AP251U in steel milling when high toughness is required.

AP351U P35(P30-P45)

PVD coated grade, medium hardness substrate, which is a supplement for AP251U in steel milling when high-toughness is required.

M Stainless steel, austenite stainless steel, martensite stainless steel

Basic grade

AP351M M35(M25-M45)

PVD coated grade is used for milling stainless steel and steel at medium and low speed under bad machining conditions.

AP403M M35(M35-M50)

Ultra-thick PVD coated grade is the first choice for stainless steel milling. It is suitable for rough milling of stainless steel under bad machining conditions.

Supplemental grade

AP251U M25(M15-M35)

PVD coated grade is used in rough and finish milling of stainless steel under very stable machining conditions.

AP403S M15(M35-M50)

PVD coated grade, the substrate has both toughness and hot hardness characteristics, and is the first choice for titanium alloy machining, as well as the machining of heat resistant alloy under weak rigidity. It is applicable to the milling at low cutting speed and can get longer tool life.

AP351U M35(M30-M45)

PVD coated grade, medium hardness substrate, which is a supplement for AP251U in steel milling when high-toughness is requested. On the way to phase out.

K Cast iron, grey cast iron, nodular cast iron

Basic grade

AC301K K25(K10-K35)

CVD coated grade, suitable for semi-finish milling and rough milling of grey cast iron at medium and high cutting speed, Recommended for dry cutting conditions, can achieve longer tool life.

AP251K K25(K15-K40)

PVD coated grade is suitable for semi-finish and rough milling of grey cast iron and nodular cast iron at medium and low cutting speed, and has good tool life under dry and wet conditions.

Supplemental grade

AP151H K15(K10-K20)

PVD coated grade is suitable for finish milling of grey cast iron and nodular cast iron, which can get constant surface quality and longer tool life.

N Non-ferrous metals

Basic grade

AW100K N15 (N10-N20)

Uncoated grade, combined with sharp cutting edge, used in aluminum alloy milling.

S Heat resistant alloy

Basic grade

AP403S S15(S35-S50)

PVD coated grade, the substrate has both toughness and red hardness characteristics, and is the first choice for titanium alloy machining, as well as the machining of heat resistant alloy under weak rigidity. It is applicable to the milling at low cutting speed and can get longer tool life.

Supplemental grade

AP351M S35(S25-S45)

PVD coated grade is suitable for semi-finishing to light rough machining of heat resistant alloy and titanium alloys.

AP403M S35(S35-S50)

The super-thick PVD coated grade is suitable for low-speed milling of heat resistant alloy and titanium alloys when high toughness is requested, especially in case of large cutting width.

H Hard material, hardened steel

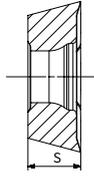

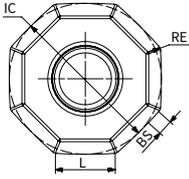

Basic grade

AP151H H15(H10-H20)

PVD coated grade, suitable for milling hardened steel, can be used in rough and finish milling, meeting the needs of most occasions.

THE EXPERTS OF DIFFICULT MACHINING

Solid End Mills

Solid Carbide End Mills

Series	Pictures	Category	Teeth	Helix angles	Application	Cutting edge tolerance (in)	Diameter (in)	Material	Information
M200-4ES		ECO line	Z=4	35°/38°		+0.00 -0.0028	0.125-1	Universal type	Used in carbon steel, tool steel, alloyed steel machining. 4 cutting edges can achieve better surface finishing. Differential helix and tooth distance eliminate vibration. The workpiece hardness is up to HRC45
M200-4RS		ECO line	Z=4	35°/38°		+0.00 -0.0028	0.125-1	Universal type	Used in carbon steel, tool steel, alloyed steel machining. The round corner can prevent edge breakage during high speed cutting. Differential helix and tooth distance eliminate vibration. With 4 cutting edge design. The workpiece hardness is up to HRC45
M200-2BS		ECO line	Z=2	30°		+0.00 -0.0028	0.125-1	Universal type	Used in carbon steel, tool steel, alloyed steel machining. For profile milling, good toughness. The workpiece hardness is up to HRC45
M245-2ES		ECO line	Z=2	45°		+0.00 -0.0028	0.125-1	Aluminium alloy	Design for vibration resistance. With special edge treatment. It can achieve better surface finish.

04	= 0.4mm
08	= 0.8mm
12	= 1.2mm

8- Cutting Edge Shape	
Example	Description
E	Honed cutting edge
F	Sharp cutting edge
T	Negative land

6- Insert Thickness(mm)		
Thickness description	Thickness mark	Example
		00 = 0.79
		T0 = 0.99
		01 = 1.59
		T1 = 1.98
		02 = 2.38
		T2 = 2.58
		03 = 3.18
		T3 = 3.97
		04 = 4.76
		T4 = 4.96
		05 = 5.56
		T5 = 5.95
		06 = 6.35
		07 = 7.94
		09 = 9.53
		11 = 11.11
		12 = 12.70
		14 = 14.29
		15 = 15.88

Insert thickness "S" refers to the distance between cutting edge nose and bottom

9- Geometry Code	
<p>DP</p> <ol style="list-style-type: none"> 1. DP geometry has high efficiency. Suitable for short hole high speed drilling. 2. Strong square insert with reinforced geometry offers excellent hole straightness. 3. Drilling holder with helical flute provides excellent chip evacuation and high hole precision. 	
<p>DU/DG</p> <ol style="list-style-type: none"> 1. Suitable cutting angle makes perfect balance for the cutting force. 2. General purpose geometry combined with two grades are suitable for P, M, K, S materials, especially good for the chip control in soft materials. 3. Obtains good surface finish. 4. Good versatility. It's suitable for rotating and non-rotating machining. 	

Drilling holder

Drilling Grade Description

P

Steel, cast steel, ferritic / martensitic stainless steel, malleable cast iron

Basic grade

AP301U(P15-P35)

Recommended grade for steel drilling.

High strength and wear resistance ultra fine carbide substrate with nanostructured PVD coating in controllable layers, high coating adhesion, wear-resistance and strength.

AP351M(P25-P40)

Recommended grade for drilling steel parts under unstable working conditions.

Good toughness and wear resistance ultrafine crystalline substrate combined with nanostructure PVD coating.
Good thermal cracking resistance, wear resistance and coating strength.

AP351U(P30-P45)

Recommended grade for drilling steel parts under complex working conditions. Very tough substrate with nanostructured PVD coating.
Good wear resistance and impact resistance.

M

Austenitic stainless steel, cast steel, manganese steel, alloyed cast iron, malleable cast iron, easy to cut steel

Basic grade

AP351M(M25-M40)

Recommended grade for stainless steel drilling.

Very tough and good wear resistance ultrafine crystalline substrate with nanostructured PVD coating.
Good thermal cracking resistance, wear resistance and coating strength.

S

Heat resistant alloy

Basic grade

AP351M(S25-S40)

Recommended grade for heat resistant alloy drilling.

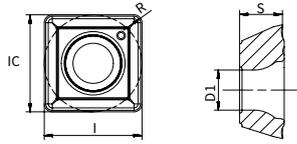

Good toughness and wear resistance ultrafine crystalline substrate combined with nanostructure PVD coating,
good resistance to thermal cracking resistance, wear resistance and coating strength.

AP351U(S30-S45)

Recommended grade for heat resistant alloy drilling under unstable working conditions and low speed.

Very tough substrate with nanostructured PVD coating, good wear resistance and impact resistance.

*The recommended cutting conditions always refer to general conditions. These cutting conditions should be adjusted according to the practical machine rigidity, tools, workpiece clamping and coolant.

Deep-hole Drilling Product Introduction

Achteck has general-purpose deep-hole drilling inserts, which offer high productivity for many industries: energy, engineering machinery, injection molding, aircraft, shipbuilding, military, etc. It can achieve good hole straightness in deep hole drilling and good surface finish. Existing geometries and grades cover steel, stainless steel and heat resistant alloy drilling.

Product application and features

- The inserts can be mounted on the deep-hole drilling head.
- AP301U(N) is the first choice for drilling steel and stainless steel
- All geometries offer good chip-breaking result
- Increased efficiency due to high feed rate
- Reduces the cost per hole

Grade	Coating	Workpiece material					
		P	M	K	N	S	H
AP301U(N)	PVD	●	●			○	

● Marked: 1st Choice ○ Marked: Supplemental application

ISO P : (P15-P35) General-purpose PVD coating with excellent wear-resistance and toughness.

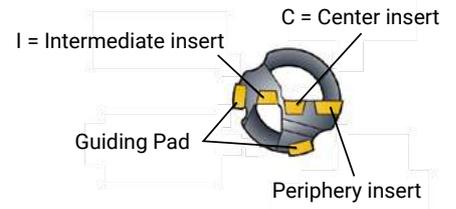

ISO M :(M15-M35) General-purpose grade for ISO-M applications, PVD coating with excellent toughness and resistance to built-up edges.

Geometry Types and Features

Geometry	Edge shape	Application
DH		<ul style="list-style-type: none"> • For general purpose. • Suitable for high cutting speed and feed. • Good chip control in most of materials.
DL		<ul style="list-style-type: none"> • Suitable for long chip materials (such as low carbon alloyed steel and duplex stainless steel). • Obtain a reliable production process in drilling materials where chip jamming can be a problem.
LH		<ul style="list-style-type: none"> • With open geometry; • Suitable for high cutting speed and feed.

Turning Insert Common Failure Mode & Solutions

Failures	Picture	Analysis	Solution
Flank wear		<ul style="list-style-type: none"> • Tool material is too soft • Excessive cutting speed • Too small clearance angle • Too low feed rate • Insufficient cooling 	<ul style="list-style-type: none"> • Choose high wear-resistant insert grade • Reduce cutting speed • Enlarge clearance angle • Increase feed rate
Crater wear		<ul style="list-style-type: none"> • Tool material is too soft • Excessive cutting speed • Excessive feed rate 	<ul style="list-style-type: none"> • Choose high wear-resistant insert grade • Reduce cutting speed • Reduce feed rate • Increase the flow of coolant
Chipping		<ul style="list-style-type: none"> • Tool material is too hard • Too low cutting edge strength 	<ul style="list-style-type: none"> • Choose tougher grade • Enhance cutting edge strength
Plastic deformation		<ul style="list-style-type: none"> • Tool material is too soft • Too fast cutting speed • Excessive cutting depth & feed rate • Insufficient cooling 	<ul style="list-style-type: none"> • Choose high wear-resistant insert grade • Reduce cutting speed • Reduce cutting depth & feed rate • Choose good thermal conductivity grade • Increase the flow of coolant
Built-up edge		<ul style="list-style-type: none"> • Too low cutting speed • Cutting edge not sharp • Unsuitable grade • Insufficient cooling 	<ul style="list-style-type: none"> • Increase cutting speed • Choose sharp geometry • Choose less adhesion grade • Increase the flow of coolant
Mechanical wear		<ul style="list-style-type: none"> • Excessive feed rate and cutting depth • Vibration 	<ul style="list-style-type: none"> • Choose tougher grade • Choose a smaller approach angle • Choose bigger corner radius • Change to high rigidity holder
Thermal cracking		<ul style="list-style-type: none"> • Excessive cutting heat change on edge 	<ul style="list-style-type: none"> • Choose dry cutting or adequate cooling • Choose tougher grade
Notch wear		<ul style="list-style-type: none"> • Excessive feed rate & cutting speed • Tool material is too soft 	<ul style="list-style-type: none"> • Choose high wear-resistance grade • Select a small entering angle • Reduce cutting speed
Coating peeling		<ul style="list-style-type: none"> • Sticky chip on the cutting edge • Chip evacuation failure 	<ul style="list-style-type: none"> • Enlarge rake angle for a sharp edge • Use chip breaker with bigger chip space

Negative and Positive Insert Comparison

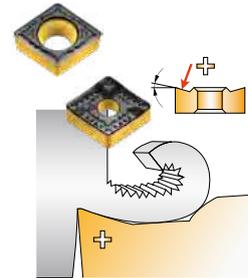

Negative insert

- Double/single sided
- High strength edge
- Zero clearance angle
- First choice for external turning
- For heavy cutting conditions

Positive insert

- Single sided
- Low cutting forces
- With clearance angle
- 1st choice for boring and turning on slender parts

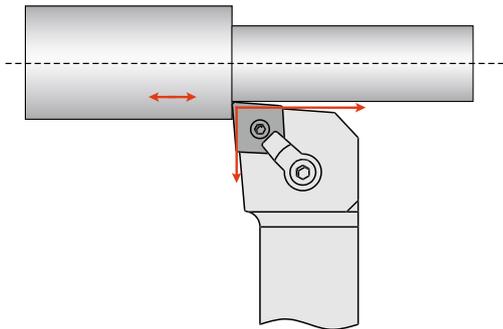

Effects of Approach Angle

Approach angle K_r is the angle between cutting edge and feed direction. It's an important angle in turning that will affect:

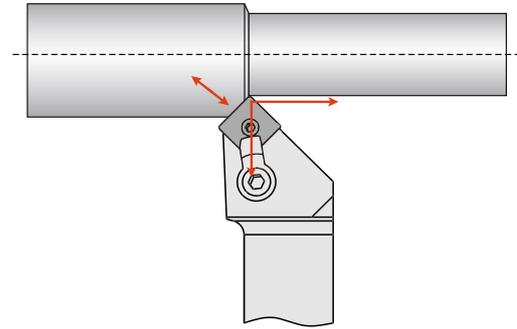

- Chip formation
- Cutting force direction
- Cutting edge length

Large Approach Angle

- Cutting forces along with axis, less tendency for vibration.
- Can turn against the shoulder
- Higher cutting forces at the entrance and exit of cut
- It is easy to get notch wear in heat resistant alloy and hard materials

Small Approach Angle

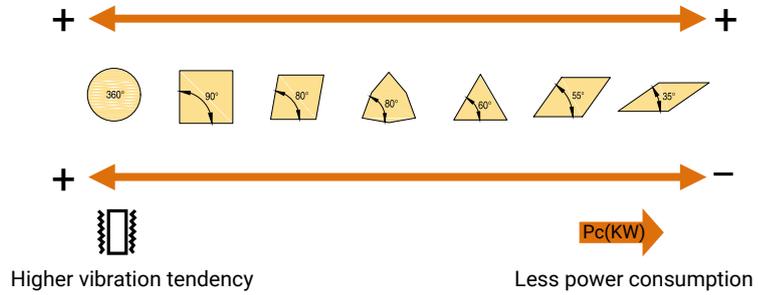

- Reduced the load on the cutting edge.
- Produced a thinner chip, higher feed rate can be used
- Reduced notch wear
- Cannot turn against a shoulder.
- Forces are directed to both axial and radial-vibration tendencies.

Insert Shape

Insert shape should be selected according to the approach angle accessibility of the tool. The largest point angle should be applied to get insert strength and reliability.

Larger point angle and higher cutting edge strength to the left.

Higher edge accessibility and operational versatility to the right.

Factors affecting insert shape selection

Insert shape	R	S 90°	C 80°	W 80°	T 60°	D 55°	V 35°
Roughing (strength)	●	●	●	▲	▲		
Light roughing/semi finishing (number of cutting edges)		▲	●	●	●	●	
Finishing (number of cutting edges)			▲	▲	●	●	●
Vibration tendency				▲	●	●	●
Longitudinal turning (feed direction)			●	▲	▲	●	●
Profiling (accessibility)			▲	▲	▲	●	●
Facing (feed direction)	▲	●	●	●	▲	▲	
Operational versatility	▲		●	▲	▲	●	▲
Limited machine power			▲	▲	●	●	●
Hard material	●	●					
Interrupted machining	●	●	▲	▲	▲		
Large approach angle			●	●	●	●	
Small approach angle	●	●		●	●		

Marked: ● Most suitable ▲ Suitable

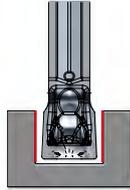

C-style 80° inserts are frequently used as it's suitable for the most applications.

Application Tips for Parting off and Grooving

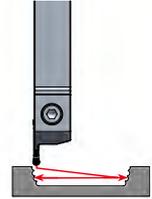

Single grooving

- Single grooving is the most economical and productive method for machining grooves.
- GS chip breaker has width tolerance of +/- 0.0008inch, and works well at low feed.

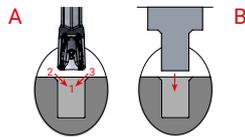

Ramping style grooving

- Ramping style grooving avoids vibration and minimizes radial force. This method can achieve best chip control and reduce notch wear during machining heat resistant alloys
- Higher feed rate can be applied to profiling RM or RA geometry to achieve higher stability and productivity.
- Note: Ramping style grooving doubled the number of passes

Chamfered corners

- In case of producing high quality grooves, usually the corners on the insert can be used for chamfering. For example, a finish grooving insert is used to chamfer, as per illustration A
- A better way to make grooves with chamfer in mass production is to order a Tailor Made insert with the exact chamfer form as per illustration B.

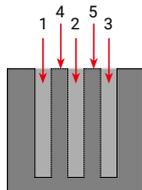

Flatness of the groove bottom

- In case of machining radial grooves, sometimes the flatness of the groove bottom is required.
- Generally, GS, TM, G chip breakers are used to machine completely flat bottom grooves.

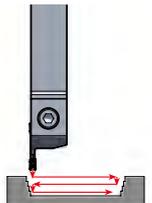

Multiple grooving

- It's the best method for rough grooving when groove depth is bigger than groove width.
- Multiple grooving will improve chip flow and increase tool life.
- Ring's width is generally 0.6-0.8 times insert's width.

Plunge turning

- TS and TM chip breaker can be used for plunge turning and ramping, as the insert design is suitable for axial and radial feed.
- In case of turning axially, depth should not exceed 0.75 x insert width.

Solid Carbide Endmill Failure Mode and Solutions

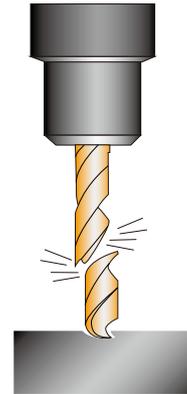

Failure	Picture	Analysis	Solution
<p>Flank wear</p> 		<ul style="list-style-type: none"> ● Abrasion between the work piece and the flank surface leads to flank wear. 	<ul style="list-style-type: none"> ● Reduce cutting speed ● Use a more wear-resistant cutting tool material ● Increase feed ● Raise coolant flow (e.g. raise coolant pressure)
<p>Built-up edge</p> 		<ul style="list-style-type: none"> ● The work piece material sticks on the cutting edge leads to built-up edge. 	<ul style="list-style-type: none"> ● Raise cutting speed ● Use more positive geometry, use a tool with a sharper cutting edge ● Reduce the feed rate ● Increase the amount of grease in the coolant (e.g. 8% oil content in coolant) ● Use uncoated grade with polished geometry (e.g. for non-ferrous metals)
<p>Fractures</p> 		<ul style="list-style-type: none"> ● Perpendicular cracks along the edge lead to fractures. ● Vibration causes fractures. 	<ul style="list-style-type: none"> ● Use a tougher cutting tool material ● Reduce cutting speed ● Change to dry machining ● Adjust feed rate
<p>Plastic deformation</p> 		<ul style="list-style-type: none"> ● High heat and mechanical stress cause plastic deformation. 	<ul style="list-style-type: none"> ● Reduce cutting speed ● Reduce feed rate ● Use a more wear-resistant cutting tool material ● Use a less sharp tool ● Optimize the coolant towards to the cutting edge
<p>Thermal cracks</p> 		<ul style="list-style-type: none"> ● Fluctuating temperature (thermal shock) causes thermal cracks. 	<ul style="list-style-type: none"> ● Reduce cutting speed ● Reduce feed rate ● Dry machining or use adequate coolant ● Use a PVD-coated (tougher) indexable insert grade
<p>Notch wear</p> 		<ul style="list-style-type: none"> ● Notch wear often occurs during machining work pieces with a hard surface (forged, casted or cold work hardened). 	<ul style="list-style-type: none"> ● Change depth of cut ● Use a tougher cutting tool material ● Use a smaller approach angle ● Use a stronger geometry (with chamfer)

Solid Carbide Drill Failure Mode and Solutions

Failures	Picture	Analysis	Solution
<p>Flank wear</p> 		<ul style="list-style-type: none"> ● Abrasion between the work piece and the flank surface leads to flank wear. 	<ul style="list-style-type: none"> ● Reduce cutting speed ● Raise feed rate ● Raise coolant flow (e.g. raise coolant pressure)
<p>Built-up edge</p> 		<ul style="list-style-type: none"> ● The work piece material sticks on the cutting edge leads to built-up edge. 	<ul style="list-style-type: none"> ● Raise cutting speed ● Raise coolant flow (e.g. raise coolant pressure)
<p>Fracture</p> 		<ul style="list-style-type: none"> ● Perpendicular cracks along the edges, chip eroding, vibration and extremely high wear resistance lead to fractures. 	<ul style="list-style-type: none"> ● Replace and recondition the tool sooner ● Improve stability (work piece/tool)
<p>Plastic deformation</p> 		<ul style="list-style-type: none"> ● High heat and mechanical stress cause plastic deformation. 	<ul style="list-style-type: none"> ● Reduce cutting speed ● Raise coolant flow (e.g. raise coolant pressure)
<p>Crater wear</p> 		<ul style="list-style-type: none"> ● Tool Material is too soft. ● Too high cutting speed. ● Too high feed rate. 	<ul style="list-style-type: none"> ● Choose more wear resistant grade ● Reduce cutting speed ● Reduce feed ● Raise coolant pressure

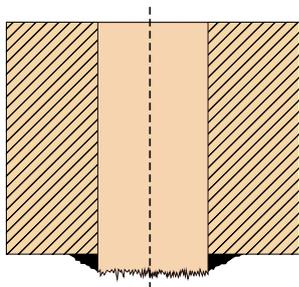

Drill Breakage Analysis

1. Check the tip geometry
2. Check the flute lengths is at least longer than drilling depth +1.5XD
3. Recondition promptly
4. Add pilot hole drilling
5. Improve system rigidity (Work piece / tool)

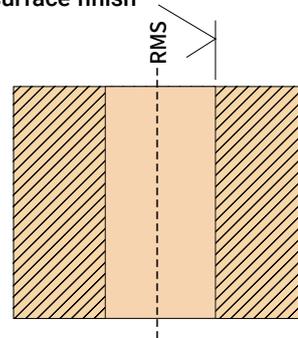

Drilling Wear and Trouble Shooting

Burr on the hole exit

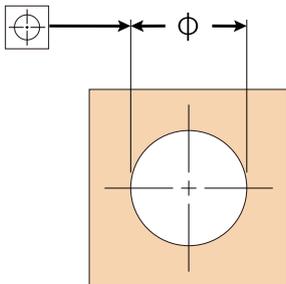

- Blunt cutting edge
- Drill tip outer corner chipped or worn

Bad surface finish

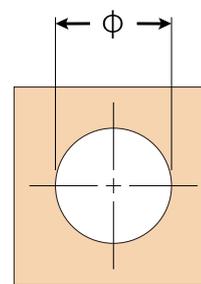

- Check edge wear
- Overcoated

Entry position out of tolerance

- Check edge geometry
- Check tool's cutting edge & chisel edge

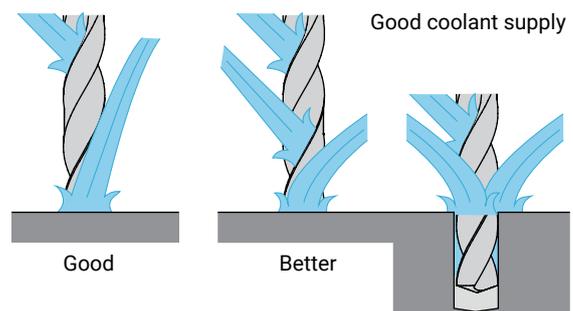

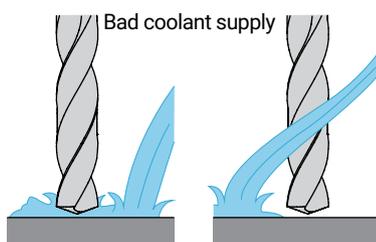

Oversized holes

- Check edge geometry
- Overcoated
- Check tool's chisel edge

Check Coolant Supply

For solid carbide drills, internal coolant is always recommended. When the drill length is over 5xDc, internal coolant is essential. Ensure the coolant is with sufficient pressure and aiming to the correct position.

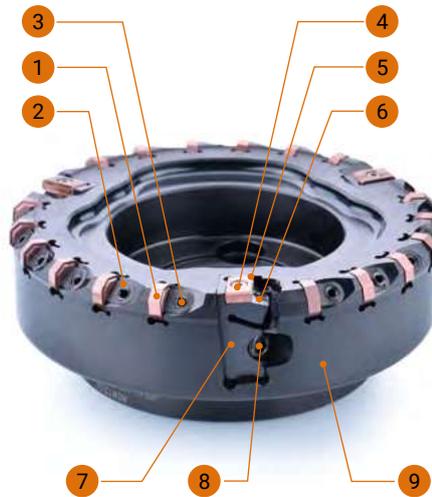

Three coolant pipes should be directly towards the drill tip when it's possible.

Installation and Adjustment Method for Cast Iron Finishing Milling Cutter

1. Clean wiper cartridge (7), completely release adjusting screw(6).
2. Clean each insert pocket, cartridge pocket, clean inserts and cartridges.
3. Install roughing inserts(1), wiper cartridges(7) and use finger to push them to the locating surface and lock the screws.
4. Install wiper inserts (5).
5. Measure the axial run out of each roughing and wiper insert.
6. Adjusting wiper inserts height through adjusting screw(6).
7. Wiper inserts Max. run out should be higher than roughing inserts by 0.001-0.002 inch.

1. Roughing inserts(ON..05..)
2. Locking wedge
3. Double-headed wedge Locking screws
4. Wiper insert clamping screw
5. Wiper insert (LN12/15)

6. Adjusting screw
7. Wiper insert cartridge
8. Locking screw for wiper cartridge
9. Cutter

Turning Machining Formula

● Cutting speed

$$V_c = \frac{\pi * D_c * n}{12} \text{ (ft/min)}$$

Vc: Cutting speed(ft/min) π: ≈3.14
 Dc: Workpiece diameter(in) n: Spindle speed(rev/min)

● Feed speed

$$V_f = f * n \text{ (in/min)}$$

Vf: Feed Speed(in/min) f: Feed rate(in/rev)
 n: Spindle speed(rev/min)

● Chip thickness

$$h = f * \sin \alpha \text{ (in)}$$

h: Chip thickness(in) f: Feed rate(in/rev)
 α: Entering angle

● Chip width

$$b = \frac{a_p}{\sin \alpha} \text{ (in)}$$

b: Chip width(in) ap: Axial depth of cut (in)
 α: Entering angle

● Chip area

$$A = h * b = a_p * f \text{ (in}^2\text{)}$$

A: Chip area(in²) ap: Axial depth of cut (in)
 f: Feed rate(in/rev)

● Cutting power

$$P_{mot} = \frac{K_c * V_c * D_c * f}{132,000 * \eta} \text{ (HP)}$$

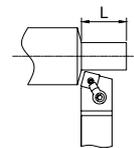

Pmot: Cutting power(HP) Kc: Unit cutting force(lbs/in²)
 Vc: Cutting speed(ft/min) Dc: Workpiece diameter(in)
 f: Feed rate(in/rev) η: Mechanical efficiency

● Chip removal

$$Q = a_p * f * V_c * 12 \text{ (in}^3\text{/min)}$$

Q: Chip removal(in³/min) ap: Axial depth of cut (in)
 f: Feed rate(in/rev) Vc: Cutting speed(ft/min)

● Work time

$$T_c = \frac{L}{f * n} \text{ (min)}$$

Tc: Work time f: Feed rate(in/rev)
 n: Spindle speed(rev/min) L: Working length(in)

Milling General Formula

● **Cutting speed**

$$V_c = \frac{\pi * D_c * n}{12} \text{ (ft/min)}$$

V_c:Cutting speed(ft/min) π: ≈3.14
D_c:Cutter diameter(in) n:Spindle speed(rev/min)

● **Spindle speed**

$$n = \frac{12 * V_c}{\pi * D_c} \text{ (rev/min)}$$

V_c:Cutting speed(ft/min) π: ≈3.14
D_c:Cutter diameter(in) n:Spindle speed(rev/min)

● **Feed speed**

$$V_f = f_z * n * Z \text{ (in/min)}$$

V_f:Feed speed(in/min) f_z:Feed per tooth(in/z)
n:Spindle speed(rev/min) Z:Number of teeth

● **Feed rate per rev.**

$$f_z = \frac{V_f}{n * Z} \text{ (in)}$$

f_z:Feed rate per rev.(in) V_f:Feed speed(in/min)
n:Spindle speed(rev/min) Z:Number of teeth

● **Feed rate per rev.**

$$f = \frac{V_f}{n} \text{ (in/rev)}$$

f:Feed rate per rev.(in/rev) V_f:Feed speed(ft/min)
n:Spindle speed(rev/min)

● **Time of cut**

$$T_c = \frac{L}{V_f} \text{ (min)}$$

T_c:Time of cut(min) L:Length of feed(in)
V_f:Feed speed(in/min)

● **Power demand**

$$P_{mot} = \frac{a_p * a_e * V_f * K_c}{396000 * \eta} \text{ (HP)}$$

P_{mot}:Cutting power(HP) a_p:Cutting depth a_e:Cutting width
K_c:Unit cutting force(lbs/in²) η:Machine efficiency coefficient(0.7-0.95)

● **Average chip thickness**

$$h_m = f_z * \sqrt{\frac{a_e}{D_c}} \text{ (in)}$$

h_m:Average chip thickness f_z:Feed per tooth(in/z)
a_e:Cutting width D_c:Cutter diameter(in)

● **Feed force**

Cutter in the center site

$$\psi_s = 2 * \arcsin \left(\frac{a_e}{D_c} \right) [^\circ]$$

Cutter in excentric site

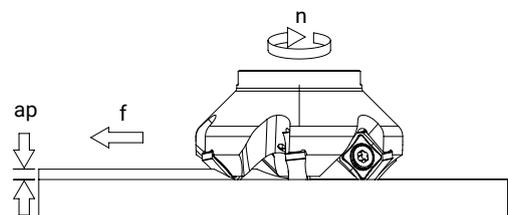

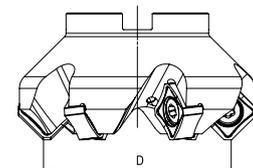

$$\psi_s = 90^\circ + \arcsin \frac{a_e - (D_c/2)}{(D_c/2)} [^\circ]$$

ψ_s:Pressure angle a_e:Cutting width
D_c:Cutter diameter(in)

● **Chip removal**

$$Q = a_p * a_e * V_f * 12 \text{ (in}^3\text{/min)}$$

Q:Chip removal(in³/min) a_p:Cutting depth
a_e:Cutting width V_f:Feed speed(ft/min)

Drilling General Recommendation

● **Cutting speed**

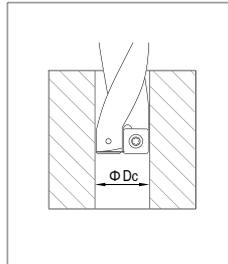

$$V_c = \frac{\pi * D_c * n}{12} \text{ (ft/min)}$$

V_c:Cutting speed(ft/min) π:≈3.14
D_c:Drill diameter((in) n:Spindle speed(rev/min)

● **Spindle speed**

$$n = \frac{12 * V_c}{\pi * D_c} \text{ (rev/min)}$$

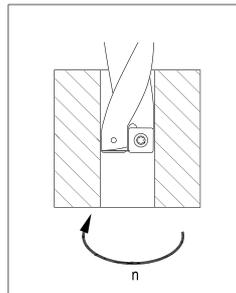

V_c:Cutting speed(ft/min) π:≈3.14
D_c:Drill diameter(in) n:Spindle speed(rev/min)

● **Feed speed**

$$V_f = f_z * n * Z \text{ (in/min)}$$

V_f:Feed speed(in/min) f_z:Feed per tooth(in/z)
n:Spindle speed(rev/min) Z:Number of teeth

● **Feed rate per rev.**

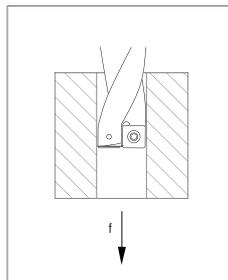

$$f_z = \frac{V_f}{n * Z} \text{ (in)}$$

f_z:Feed rate per rev.(in) V_f:Feed speed(in/min)
n:Spindle speed(rev/min) Z:Number of teeth

● **Feed rate per rev.**

$$f = \frac{V_f}{n} \text{ (in/rev)}$$

f:Feed rate per rev.(in/rev) V_f:Feed speed(in/min)
n:Spindle speed(rev/min)

● **Chip removal**

$$Q = \frac{V_f * \pi * D_c^2}{4} \text{ (in}^3\text{/min)}$$

Q:Chip removal(in³/min) V_f:Feed speed(in/min)
π:≈3.14 D_c:Drill diameter(in)

● **Horse power**

$$H_p = \frac{P_{mot}}{0.75}$$

H_p:Horsepower P_{mot}:Cutting power(KW)

● **Power demand**

$$P_{mot} = \frac{K_c * V_c * D_c * f}{132,000 * \eta} \text{ (HP)}$$

P_{mot}:Cutting power(HP) K_c:Unit cutting force(lbs/in²)
V_c:Cutting speed(ft/min) D_c:Workpiece diameter(in)
f:Feed rate(in/rev) η:Mechanical efficiency

● **Torque**

$$M_c = \frac{D_c^2 * K_c * f_z}{8} \text{ (in*lbs)}$$

M_c:Torque D_c:Drill diameter(in)
K_c:Unit cutting force(lbs/in²) f_z:Feed rate per rev.(in/rev)

● **Cutting thickness**

$$h = f_z * \text{sink (in)}$$

h:Cutting thickness(in) f_z:Feed rate(in/rev)
